

# Financial Algebra: Advanced Algebra with Financial Applications

When a business is owned by more than one person, they do not necessarily own equal portions.

Ex: Michelle invests \$15,000 in a partnership that has four other partners. The total investment of all partners is \$240,000. What percent of the business does Michelle own?

$$\frac{15,000}{240,000} = \frac{15}{240} = 0.0625 = 6.25\%$$

Ex2: The total number of shares of stock in the Bulls Corporation is 650,000. Mike owns 12% of the shares. How many shares of Bulls Corporation stock does he own?

Solutions in Financial Algebra: Advanced Algebra with Financial Applications ( ). Digital Edition. Financial Algebra: Advanced Algebra with Financial Applications.
